nayudu72y@gmail.com

Objective summary:

24+ years of global IT leadership managing enterprise infrastructure for 40,000+ users and 150+ applications, including 40 mission-critical systems in finance and HR.

- Advanced academic background: **B.E. (Engineering), LL.B., LL.M., MSc Cybersecurity (University of London, final semester)** plus **gold-standard certifications** (CISSP, **CISA**, PMP, Scrum Master, **ITIL Expert**, **AWS Certified Solutions Architect**).
- As a **CISA-certified professional**, conducted **system audits for capital market intermediaries** and participated in **testing activities for stock and commodity brokers**, ensuring compliance and operational integrity.
- Expertise in **data center & cloud services (AWS, Google Cloud), virtualization (VMware, Hypervisor Type-1/2), Unix/Windows administration, IAM, disaster recovery (RTO/RPO), SIEM (Splunk)**.
- **Problem Management Leadership**: Directed and reviewed **Root Cause Analysis (RCA)** documentation, ensuring accuracy before business reporting.
- **Change Management Role**: Acted as **reviewer and approver**, collaborating with business stakeholders on **critical changes** across infrastructure and applications.
- Knowledge **AI/ML tools, prompt engineering Certified, and agentic,** applying in day to day routine work
- Proven track record in **Tier-3 escalations, business continuity planning, SLA/KPI management, and cybersecurity governance**, bridging **technology, law, and compliance**.

CERTIFICATIONS

Google Cybersecurity Professional Certificate V2 - 2025
Certified information System Auditor- CISA- 2025
Google Foundations of Cybersecurity - 2025
Certified information System Security Professional -CISSP July -2024
AWS Certified Solutions Architect - 2024
Project Management Professional (PMP)
Google Associate Cloud Engineer
Paralegal Certificate
Certificate in Intellectual Property Rights
Post Graduate Certificate in Project Management (PGCPM) from IGNOU
Scrum Master
ITIL Expert Certified
Diploma in Intellectual Property Rights IPR
Certificate in Patent procedures.

EDUCATION-

Master of Science M.Sc. Cyber Security - University of London | 2024 Oct –Oct 2026

Bachelor of Engineering B.E 1996 (Electronic) Bangalore University | 1990=1996

Master of Laws LLM| Constitutional Law KLE College of Law 2019 - 2021

Bachelor of Laws LLB Sheshadripuram Law College |2016 - 2019

WORK EXPERIENCE

Capgemini – Program Manager (04/2022 to 05/2025)

- Manage global IT infrastructure for 40,000+ users across distributed and virtualized environments.
- Administer compute, storage, and network resources, ensuring high availability and performance.
- Lead Tier-3 escalations, RCA reviews, and patch management across Windows and Linux systems.
- Change Management: Reviewed and approved Standard, Normal, and Emergency changes submitted by application and infrastructure teams. Coordinated with business stakeholders, answered queries in CAB meetings, and ensured ITIL compliance during change governance.
- Problem Management: Conducted RCA using structured methods such as the 5 Whys, documented Known Errors in the KEDB, and collaborated with teams to implement preventive measures, reducing incident recurrence.
- Oversee change management processes and ensured ITIL compliance during CAB meetings.
- Utilize tools like **ScienceLogic and Dynatrace** for real-time monitoring and predictive analysis.
- Drive CSI initiatives through data-driven analysis of incidents, problems, and changes.
- Coordinate BC/DR planning and execution in collaboration with cross-functional teams.
- Conduct governance meetings to align service delivery with operational KPIs and strategic goals.
- Strategic & Governance-Level Responsibilities
- Ensured compliance of enterprise-wide cybersecurity policies aligned with ISO 27001, NIST, and GDPR frameworks.
- Directed risk assessments and compliance audits to ensure adherence to regulatory standards across cloud and on premise environments.
- Spearheaded cross-functional initiatives to integrate cybersecurity into business continuity (**Cyber Resilient Backups**) and disaster recovery planning.
- Managed Security Operations Center (SOC) activities, including threat detection, incident response, and vulnerability management.
- Oversaw deployment and tuning of SIEM tools **(e.g., Splunk,)** for real-time monitoring and log correlation.
- Implemented IAM solutions and enforced **role-based access controls** across hybrid infrastructure.
- Managed multi-cloud environments (AWS, GCP) through hardened configurations, encryption protocols AES, IPsec, and automated compliance checks.
- Conducted regular penetration testing and red team exercises to identify and remediate security gaps.
- Managed team zero trust / Network Segmentation and containerized applications using.

  Training & Awareness
- Developed cybersecurity awareness programs tailored to different user groups, reducing phishing susceptibility by over 40%.
- Collaborated with to align cybersecurity controls with data protection laws /DPO and identity governance mandates.
- Legal & Compliance Integration

DXC Technology – I.T Service Delivery Infrastructure Manager (10/2003 to 01/2021)

- Managed end-to-end IT service delivery and customer relationships, ensuring SLA compliance and high client satisfaction.
- Led a 30-member team and oversaw global IT operations for storage and backup across 25 customers (20+ PB data, 8,000+ servers).
- Change Management: Reviewed and approved Standard, Normal, and Emergency changes submitted by application and infrastructure teams. Coordinated with business stakeholders, answered queries in CAB meetings, and ensured ITIL compliance during change governance.
- Problem Management: Conducted RCA using structured methods such as the 5 Whys, documented Known Errors in the KEDB, and collaborated with teams to implement preventive measures, reducing incident recurrence.
-
- Handled change requests, escalations, and monthly service reviews, aligning performance metrics with strategic goals.
- Forecasted resource needs, managed staffing, and coordinated recruitment and appraisals in collaboration with HR.
- Implemented ITIL and project management best practices to drive operational excellence and continuous improvement.
- Conducted infrastructure risk assessments and guided problem management teams on preventive and corrective actions.
- Monitoring and observability: Deployed and managed monitoring platforms to provide 24/7 alerting, SLA dashboards, and capacity trend analysis.
- Backup and recovery: Operated enterprise backup solutions (Veritas NetBackup; Veeam) and designed restore playbooks to meet RTO/RPO targets.
- Storage and virtualization: Managed SAN/NAS systems (EMC/VMAX; NetApp) and virtualization platforms (VMware vSphere; Hyper-V) to optimize storage tiring and VM density.
- Cloud and hybrid operations: Coordinated migrations and hybrid operations using AWS Services, including backup-to-cloud strategies and cost/usage optimization.
- ITSM and ticketing: Administered **ServiceNow** for incident, change, and problem workflows; used JIRA for project tracking and cross-team coordination.
- Automation and scripting: Automated routine tasks and runbooks with Ansible and custom scripts, reducing manual effort and mean-time-to-repair.
- Security and log analytics: Integrated logs and events into SIEM (Splunk) for proactive detection; enforced patching and vulnerability tracking aligned with compliance requirements.
- Configuration and asset management: Maintained CMDB accuracy, lifecycle tracking, and standardized OS/build images to reduce configuration drift.
- Capacity, reporting and cost control: Produced monthly capacity and utilization reports, identified consolidation opportunities, and recommended optimizations that lowered OPEX.
- Disaster recovery and business continuity: tested DR playbooks and run periodic failover drills to validate recovery objectives and stakeholder readiness.

Nettur Technical Training Foundation — Senior Training Officer (Oct 2000 – Mar 2002)

- Delivered technical and hands-on training in electronics and computer science to senior-secondary students and entry-level learners.
- Designed and taught modules on analog/digital electronics, microcontrollers, programming and basic networking.
- Ran lab sessions and project-based work (sensor interfacing, simple robotics), supervising assembly, testing, and debugging.
- Prepared lab manuals, assessments, and feedback; mentored students on higher-education and vocational pathways.

Smt. Kamala Bai Polytechnic — Computer Science Lecturer (Sep 2000 – Mar 2002)

- Taught diploma-level computer science subjects to engineering students, combining theory with practical labs to prepare them for exams and industry roles.
- Delivered lectures on programming, data structures, operating systems, and basic networking.
- Ran hands-on labs and assignments using IDEs and microcomputer kits to build coding and troubleshooting skills.
- Designed course materials, assessments, and lab guides; evaluated student projects and provided constructive feedback.
- Mentored students on project work, internship preparation, and career options in IT and engineering.
- Maintained lab equipment, ensured safety protocols, and coordinated with faculty to align curriculum with industry needs.

SJES Polytechnic – Computer Science & Electronics Lecturer (08/1996 to 06/1997)

- Taught diploma courses in computer science and electronics, covering programming fundamentals, digital logic, and basic circuit theory.
- Conducted laboratory sessions where students assembled circuits, programmed microcontrollers, and practiced troubleshooting.
- Prepared course materials and assessments, mentored students on projects, and coordinated with faculty to maintain lab equipment and safety.
